

The Journal of PHARMACOLOGY

And Experimental Therapeutics

A Publication of the American Society for Pharmacology and Experimental Therapeutics

June 2024

Vol. 389, No. 3

Contents

VIEWPOINT

- Proximity Labeling EXCELLs in the Spleen 243
Jacob Geri
- Utilizing a Proximity Dependent Labeling Strategy to Study Cancer-Immune Intercellular Interactions In Vitro and In Vivo 246
Kaitlyn Maffuid and Yanguang Cao

VIEWPOINT

- A Little “Re-Cognition” Goes a Long Way for Pro-Cognitive Therapeutics in Alcohol Studies 254
Michael C. Salling, and Kristen E. Pleil
- ☐ Cognitive-Enhancing Effects of Acetylcholine Receptor Agonists in Group-Housed Cynomolgus Monkeys Who Drink Ethanol 258
Lindsey K. Galbo-Thomma, Phillip M. Epperly, Bruce E. Blough, Antonio Landavazo, Santiago J. Saldaña, F. Ivy Carroll, and Paul W. Czoty

MINIREVIEWS

- Targeting Prefrontal Cortex Dysfunction in Pain 268
Kai Kummer and Patrick L. Sheets
- Bromodomain and Extraterminal Domain Protein 2 in Multiple Human Diseases 277
Yikang Ji, Wantao Chen, and Xu Wang
- The Prospect of Biomimetic Immune Cell Membrane-Coated Nanomedicines for Treatment of Serious Bacterial Infections and Sepsis 289
Alexandria Hoffman and Victor Nizet

DRUG DISCOVERY AND TRANSLATIONAL MEDICINE

- ☐ Identification of 1,3,8-Triazaspiro[4.5]Decane-2,4-Dione Derivatives as a Novel δ Opioid Receptor-Selective Agonist Chemotype 301
Yazan J. Meqbil, Jhoan Aguilar, Arryn T. Blaine, Lan Chen, Robert J. Cassell, Arynah A. Pradhan, and Richard M. van Rijn

LETTER TO THE EDITOR

- Comments on: Increasing Enzyme Mannose-6-Phosphate Levels but Not Miglustat Coadministration Enhances the Efficacy of Enzyme Replacement Therapy in Pompe Mice 310
Jon J. Brudvig, Steve Tuske, Jeff Castelli, and Jill M. Weimer

RESPONSE TO LETTER TO THE EDITOR

- Response to Comments on “Increasing Enzyme Mannose-6-Phosphate Levels but Not Miglustat Coadministration Enhances the Efficacy of Enzyme Replacement Therapy in Pompe Mice” 313
Kelly George and Allyson Anding

☐ Supplemental material is available at jpet.aspetjournals.org.

About the cover: Biomimetic membrane-coated nanoparticles retain the surface architecture of the cell from which they were derived. See the article by Hoffman and Nizet ([dx.doi.org/10.1124/jpet.123.002095](https://doi.org/10.1124/jpet.123.002095)).
