What are the implications of recent advances in cellular and molecular biology for pharmacologists and toxicologists?

**WORKSHOP ON CELLULAR AND MOLECULAR TOXICOLOGY**

Edited by Don Fawcett & James Newberne

That's the subject addressed in this new book, the product of a symposium organized by the Pharmaceutical Manufacturer's Association Foundation. The Workshop brings together leading authorities from cell biology, pharmacology, pathology, and toxicology to consider the implications of recent advances in cellular and molecular biology for you and your colleagues.

The Workshop covers the following topics:

- Current concepts of molecular organization of the cell membrane... plus surface specialization related to cell-to-cell communication
- Nature of surface receptors and their interaction with hormones... plus experimental studies on the induction of acetylcholine receptors on muscle
- Membrane systems of the cytoplasm, including their role in detoxification & metabolism of drugs... along with changes in these functions with advancing age
- Important section on the nucleus... includes recent progress in defining the structure of chromatin, mechanisms of DNA damage and repair, nature of interaction between steroid hormones and the nucleus
- Discussion of relative advantages of microbial methods and sister chromatid exchange in mammalian cells for the assessment and mutagenicity of drugs and environmental toxins... plus methods of protection against the mutagenic effect of certain drugs
- Section on lysosomes and their destabilization by drugs... plus approaches to the treatment of lysosomal disease

Now the results of this unique study are available to you in a hardbound overprint from Pharmacological Reviews. If you want the latest information on advances in toxicology, this is one meeting you can't afford to miss.

---

**Handy manual highlights most frequently used drugs**

**MANUAL OF CLINICAL PHARMACOLOGY**

Edited by David H. Robertson, MD, Assistant Professor of Medicine and Pharmacology. Vanderbilt University School of Medicine, and Craig R. Smith, MD, Acting Director, Division of Internal Medicine. The Johns Hopkins University School of Medicine

A handy new manual supplements the large, more unwieldy references that are probably already part of your library. It gives you the most thorough understanding possible of the several dozen key drugs that are most commonly used in clinical practice. An annotated bibliography on these drugs is supplied as a point of access to the more detailed pharmacological literature. The discussion sections aren't intended to be complete reviews... but they identify for you quickly which drugs are practical... or difficult... or new.

This manual will supplement your knowledge of the many thousands of drugs on the market by giving you a very thorough understanding of the few dozen drugs that are most frequently used, highlighting those areas that are most important to you.

1981/about 250 pages/about $18.00 [U.S.] (*7300-1)

**RETURN THIS COUPON TO GET YOUR NEW BOOKS ON 20-DAY FREE TRIAL**

SEND ME ___ copies of Fawcett & Newberne's WORKSHOP ON CELLULAR AND MOLECULAR TOXICOLOGY (*3047-7) at $20.00 per copy [U.S. price]. AND send me ___ copies of Robertson & Smith's MANUAL OF CLINICAL PHARMACOLOGY (*7300-1) at about $18.00 per copy [U.S. price].

☐ Send me these books to examine for 20 days without obligation.

☐ Payment enclosed - Williams & Wilkins pays postage.

Charge to my: ☐ VISA ☐ MASTERCARD

card # ___________________________ exp date ____________

Prices subject to change without notice. Prices outside U.S. slightly higher. Residents of CA, MD, and VA please add sales tax. Please pay in U.S. dollars.

Comparison of the Receptors Mediating the Cathecolamine Hypopolarization and Slow Inhibitory Postsynaptic Potential in Sym pathetic Ganglia. Alison E. Cole and Patricia Shinick-Gallagher

Sodium Valproate Enhancement of γ-Aminobutyric Acid (GABA) Inhibition: Electrophysiological Evidence for Anticonvulsant Activity. Frank Baldino, Jr. and Herbert M. Geller

Locomotor Activity and Antinociception after Putative Mu, Kappa and Sigma Opioid Receptor Agonists in the Rat: Influence of Dopaminergic Agonists and Antagonists. Edgar T. Iwamoto

Prenatal Exposure to Imipramine Alters Early Behavioral Development and Beta Adrenergic Receptors in Rats. Kathryn M. Jason, Thomas B. Cooper and Eitan Friedman

In Vivo Selectivity of Prazosin but not of WB4101 for Postsynaptic Alpha-1 Adrenoceptors. R. Massingham, M. L. Dubocovich, N. B. Shepperson and S. Z. Langer

Mode of the Excitatory and Inhibitory Actions of Ciguatoxin in the Guinea-Pig Vas Deferens. Y. Ohizumi, S. Shibata and K. Tachibana

Pharmacodynamics of Minaxolone A New Steroidal Anesthetic. Laurence E. Mather, Geoffrey K. Gourlay, Kent S. Parkin and John G. Roberts

Effect of Cyclic AMP Phosphodiesterase Inhibitors on Cardiac Sarcolemmal 5′-Nucleotidase. Clayton E. Heyliger, Vincenzo Panagia and Naranjan S. Dhalla

Effects of N-(6-Aminoheptyl)-5-Chloro-1-Naphthalenesulfonamide and Other Calmodulin Antagonists (Calmodulin Interacting Agents) on Calcium-Induced Contraction of Rabbit Aortic Strips. Masashi Kanamori, Michiko Naka, Masahisa Asano and Hiroyoshi Hidak

The Influence of Chelating Agents on the Distribution and Biotransformation of Methylmercuric Chloride in Rats. Felicitas Planas-Bohne

Species and Regional Differences in Cholinergic Blocking Actions of β-Bungarotoxin. Akira Miura, Ikunobu Muramatsu, Motohatsu Fujisawa, Kyozo Hayashi and Chen-Yuan Lee

The Inhibition by Flunarizine of the Norepinephrine-Evoked Contraction and Calcium Influx in Rat Aorta and Mesenteric Arteries. T. Godfraind and D. Dieu

The Role of Morphological and Functional Changes in Adrenergic Nerves for the Development of Colchicine-Induced Supersensitivity in the Rat Vas Deferens. Akira Saito, Yutaka Kasuya and Katsumoshi Goto

Evidence for Two Subtypes of Alpha Adrenergic Receptors in Canine Airway Smooth Muscle. Alan R. Leff and Nilda M. Munoz
