**O₂ CONSUMPTION MONITOR**

Simultaneously Monitors Oxygen Consumption of 1 to 8 Animals

FEATURES
- One controller for 1 to 8 animal cages
- Continuous measurement of Oxygen Consumption over a 24 hour period in ml oxygen/kg of body weight/hour in STP units.
- Printer prints results every four (4) minutes for each of 1 to 8 animals as well as oxygen percent level in each animal cage.
- System adaptable to small or large animals.
- Continuous airflow through system with oxygen level measurements at the output and input.
- High accuracy, *±*98% of full measuring range e.g. typical error 3.30 ml oxygen/kg/hour in 3600 ml oxygen/kg/hour range.
- User adjustable alarm warns user of possible hypoxia
- Reusable absorbents
- Auto reference assures high accuracy, system periodically measures ambient air and corrects itself.
- Optional RS-232 interface for communication with other computers.
- Insensitive to temperature variations in the animal cage.

Columbus Instruments also supplies monitors for: Animal Activity, Cardiac Output, Drinking and Feeding, Respiration Rate and Startle Response.

For more information, call or write to:
COLUMBUS INSTRUMENTS INTERNATIONAL CORPORATION
590 N. HAGUE AVE., COLUMBUS, OHIO 43204 U.S.A.

---

**RATS!!! CARDIAC OUTPUT BY THERMODILUTION**

"CARDIMAX-III-R" is the only computer which can measure cardiac output of rats (also guinea pigs, rabbits, dogs, chickens, and humans). For rats, it uses unique Columbus Instruments thermodilution microprobes 1/3 mm in size! It also measures systolic, diastolic and mean blood pressures and heart rate up to 1000 beats per minute. Stroke volume is also automatically computed.

**Why Measure Cardiac Output of Rats?**

Development of salt sensitive and salt resistant strains of rats provided inexpensive models for studying hypertension. Dynamics of rat circulatory system is similar to dogs or humans. Studies on rats cost only a fraction of studies using dogs.

**Automatic Measurements Without Supervision**

All parameters (cardiac output, stroke volume, three blood pressures, blood temperature, heart rate, time of day) can automatically be measured periodically and printed when using "CARDIMAX-III-R" with Columbus Instruments Automatic Injector and Printer.

ATLAS OF MAMMOGRAPHY

Histologic and Mammographic Correlations

John E. Martin, MD, Professor of Radiology, University of Texas M.D. Anderson Hospital & Tumor Institute, Houston
Section 19, Golden’s Diagnostic Radiology Series, John H. Harris, Jr., Series Editor

John Martin’s Atlas of Mammography is a new clinical guide you’ll want to have on hand. Here’s why...
1. The mammograms are reproduced in blue. What you see in the clinic is what you get in the atlas. You don’t have to interpret from one color range to another and that means you can depend on what you see.
2. It’s written by John Martin.
3. The emphasis is on diagnosis of cancers 5 mm in size or less. These minimal cancers are the most difficult to diagnose and the easiest to miss in surgery.
4. Dr. Martin has selected numerous examples of benign and pathologic cases.
5. Mammography is correlated with histology. You get a thorough understanding of disease and its manifestations and a thorough understanding of the pathologist’s report.

Let John Martin share his expertise with you...FREE for 20 days.

EMERGENCY RADIOLOGY

Self-Assessment

Charles F. Mueller, MD, FACR, Professor of Radiology, Director, Radiology Residency Training Program and Douglas A. Rund, MD, Assistant Professor and Director, Division of Emergency Medicine, College of Medicine, The Ohio State University

How competent are you at interpreting emergency radiographs? This case method manual gives you practice in picking up the clues...plus feedback about what you’re doing right (and wrong).

Here’s how it works. You look at the radiograph...you interpret the radiograph...you check your interpretation against the text. This text gives you concise discussion — concentrating on differential diagnostic clues — of common and uncommon clinical problems. In a little more than 300 pages, you get radiologic solutions for nearly fifty cases.

Here are the ways this new book works for you:
  • It’s organized by region...cardiovascular, respiratory, abdominal, spinal, extremity, and face and skull emergencies.
  • It gives you exceptional material on occult traumatic pitfalls of E.D. radiology...and valuable material on airway problems.
  • It supplies a good review of the clinical events benefitting from specific roentgen exams.

You owe it to yourself to become familiar with the information contained in this handy guide.

1982/328 pages/142 illustrations/#6150-X/$37.00

ORDER FREE...from anywhere in the US except AK and HI. Call 1-800-638-0672. From MD, call 528-4221 collect.

Residents of California, Maryland and Virginia, please add state sales tax. Prices subject to change without notice. Prices slightly higher outside the US.

Baltimore, Maryland 21203
Notice to Contributors (Effective July 1976)

Scope of Submitted Manuscripts
The Journal invites for review original papers dealing with any aspect of interactions of chemicals with biological systems. Both terms—“chemicals” and “biological systems”—imply as general application as possible. Manuscripts dealing primarily with new methods will be reviewed only if the methods are shown to lead to new or more reliable data than were previously attained.

Organization of the Manuscript.
In most cases manuscripts should contain the following sections in the order listed: 1) title page; 2) running title page; 3) abstract; 4) introduction; 5) methods; 6) results; 7) discussion; 8) acknowledgments; 9) references; 10) footnotes; 11) tables; 12) legends for figures; and 13) figures. Each section should begin on a new page.

Submission of Manuscripts.
Two typewritten copies, double-spaced on 21.6 by 28-cm paper, should be sent to Dr. Eva King Killam, Department of Pharmacology, School of Medicine, University of California, Davis, California 95616. Pages should not be stapled together.

It is understood that neither the manuscript nor the data it contains have been previously published nor are being submitted elsewhere for publication.

If and when the manuscript is accepted for publication, it will be necessary for the American Society for Pharmacology and Experimental Therapeutics, Inc., to receive in writing assignment of copyright from all authors of each manuscript. The forms for this assignment will be mailed from the Editorial Office.

1. Title page. This should contain the complete title of the manuscript, the names of all authors, and the laboratory of origin.

2. Running title page. Each published paper needs a running title, which appears at the top of each page in the Journal. The running title should contain no more than 35 spaces, including punctuation. It should convey the sense of the full title. Commonly used abbreviations (such as "ATP," "ACh," etc.) may be used in the running title. This page should also contain the name and address of the person to whom galley proof should be sent.

3. Abstract. Each published paper should be preceded by an abstract. The abstract should begin with the names of the authors and the title of the manuscript. It should present in a concise form the purpose, the general methods, the findings, and the conclusions of the manuscript. Abstracts should be limited to 200 words or less; abstracts of more than 250 words will not be accepted.

4. Introduction. This section should not be labeled. It should contain a clear statement of the aims of the reported work, or of the hypotheses which the work was designed to test. A brief account of the background of the reported work may also be given in this section.

5. Methods. This section should contain explicit, concise descriptions of all new methods or procedures employed in the work. Modifications of previously published methods should be described. Commonly used methods require only a citation of the original source. When methods are described, the description should be such as to enable the reader to judge their accuracy, reproducibility, reliability, etc. Very extended descriptions of methods may be submitted for deposit with the American Society for Information Science National Auxiliary Publications Service (NAPS) c/o Microfiche Publications, P.O. Box 3513, Grand Central Station, New York, NY 10017. A text reference or footnote stating that the full description is available from NAPS permits interested readers to obtain the information, and does not occupy an inordinate amount of Journal space. There is a nominal charge to authors for this procedure; those who request the complete information from NAPS pay a small fee.

6. Results. This section ordinarily contains the experimental data to be presented, but not extended discussions of their significance. Results are usually easier for readers to grasp if they are presented in graphic or tabular form, rather than discursively. Graphic presentation of data is preferred over tabular presentation. Data should not be needlessly repeated in text, tables, and figures. Sufficient data must be given to allow readers to judge the variability and reliability of the results. Statistical tests used and the data analyzed should be explained so that the interested but non-expert reader can interpret the findings.

7. Discussion. This section should be pertinent to the results. Speculative discussion is not discouraged, but the speculation should be based on the data presented. The discussion should be as concise as possible, within the limits of the ideas which the authors wish to propose.

8. Acknowledgments. These may be included at the end of the body of the text of the manuscript, but should have a separate heading.

9. List of references. In text citations, give the author's name and the year of publication (e.g., McCarthy, 1952; Ruth and Gehrig, 1929). With more than two authors, the text citation should contain the name of the first author, followed by "et al.," and the date (e.g., Kennedy et al., 1960). In the list of references, entries are to be arranged alphabetically by author, and not numbered. All authors' names are to be given. If reference is made to more than one publication by the same authors in the same year, suffixes (a, b, c, etc.) should be added to the year in the text citation and in the list of references.

The list of references is to contain, in sequence, the following information: authors' names and initials, title of the cited article, title of the journal in which the article appeared (abbreviated; see below), volume number of the journal, inclusive pagination, and year of publication. Abbreviations for journals should conform to the Biosis List of Serials (BioSciences Information Services of Biological Abstracts, Philadelphia, Pa. 19103). Citations of personal communications or of unpublished observations should be given in parentheses at the appropriate place in the text, not in the list of references. A paper may not be cited as "in press" unless it has been accepted for publication. In such cases, give the name of the journal.

Except in extraordinary circumstances, no more than four references should be cited in support of any given point.

10. Footnotes. All footnotes to the title, authors' names, or text should be indicated by arabic numeral
superscripts, not by letters or other symbols. The footnotes should be typed in sequence on a separate page, not at the bottom of the pages on which they appear. Footnotes to tables are discussed under Tables, below.

11. Tables. Each table should be on a separate page. Tables should be numbered consecutively with arabic numerals, and should be designed to fit the column or page size of the Journal. A brief descriptive title should be given at the top of each table. The table number should be given in capital letters, the title in boldface upper and lower case letters (e.g., TABLE 3. Uptake of labeled drug by rat liver slices). The footnotes to the tables should be referred to by italicized lower case superscript letters (a, b, c, etc.) and should appear beneath the table involved, not on a separate page of the manuscript. Extensive tabular material not absolutely essential to the manuscript will be accepted for deposit with the ASIS/NAPS (see “Methods,” above). In such instances a footnote in the published paper will refer the interested readers to NAPS from which copies may be obtained.

12. Legends for figures. These should be numbered consecutively in arabic numerals, and should appear on a separate page of the manuscript. Legends should explain the figures in sufficient detail so that repeated referral to the text is unnecessary. Abbreviations in the legends should conform to those in the text (see “Abbreviations,” below).

13. Figures. Illustrations should be submitted in duplicate as unmounted glossy photographic prints, no larger than 8 by 10 inches. The authors’ name and address, and the number of the figure should be placed on the back of each print. Illustrations must be clear enough to permit reproduction without retouching, and legibility after reduction to single-column size (approximately 3½ inches in width). Uniform symbolism should be used for all illustrations in a manuscript. Symbols, numbers, and letters in the illustrations must be at least 1.5 mm in height after reduction to single column size. The title of each figure should appear in the legend rather than on the figure itself. Photomicrographs and electron micrographs should be labeled with a magnification calibration in micro or Angstrom units. A statement of the magnification should appear in the figure legend.

Abbreviations.
Magnitudes of variables being reported should be expressed in numerals. Most abbreviations are used without punctuation, with no distinction between singular and plural forms (e.g., 1 mg, 25 mg). The usual prefixes are to be used for multiples or submultiples of the basic units (e.g., kg, g, mg, pg, ng, pg). The following abbreviations, or their properly prefixed multiples or submultiples, may be used without definition in the text, tables, and figures:

Units of mass
g gram
mol mole
Eq equivalent
μ at microgram

Units of concentration
M molar (moles/liter)
N normal (Eq/liter)
% percent

Units of electricity
V volt
A amperes
Hz cycles/sec

Units of radioactivity
Ci count per min
cpm disintegrations per min
dpm roentgen

Units of length or volume
m meter
μ micron
A Angstrom
l liter

Units of time
hr hour
min minute
sec second

Miscellaneous
°C degrees of temperature
g gravity
LD50, ED50, etc. median doses
i.v., i.p., i.m. optically isometric forms
S.D. routes of drug administration
S.E. standard deviation
S.E. standard error

drugs

Drugs.
Generic names should be used in text, tables, and figures. Trade names may be mentioned in parentheses in the first text reference to the drug, but should not appear in titles, figures or tables. When a trade name is used, it should be capitalized; generic or chemical names are not capitalized. The chemical nature of new drugs must be given when it is known. The form of drug used in calculations of doses (e.g., base or salt) should be indicated. When several drugs are used, it may save space to include a separate paragraph in “Methods,” or a separate table or footnote, listing the relevant information about all drugs employed.

Page Charges.
Authors are assessed page charges at the rate of $30 per printed page. With the galley proof, authors will receive a request for information concerning such charges. These charges will be assessed only if they involve no personal expense to the authors.

The cost of a limited number of illustrations will be borne by the Journal: the cost of excessive numbers of illustrations will have to be defrayed by the authors.

Copies of this Notice may be obtained free of charge from the Editor.
