**O₂ CONSUMPTION MONITOR**

Simultaneously Monitors Oxygen Consumption of 1 to 8 Animals

**FEATURES**
- One controller for 1 to 8 animal cages
- Continuous measurement of Oxygen Consumption over a 24 hour period in ml oxygen/kg of body weight/hour in STP units
- Printer prints results every two hours for each of 1 to 8 animals as well as oxygen percent level in each animal cage
- System adaptable to small or large animals
- Continuous airflow through system with oxygen level measurements at the output and input
- High accuracy, ±98% of full measuring range e.g. typical error ±30 ml oxygen/kg hour
- User adjustable alarm warns user of possible hypoxia
- Reusable absorbents
- Auto reference assures high accuracy. System periodically measures ambient air and corrects itself
- Optional RS-232 interface for communication with other computers
- Inexpensive to temperature variations in the animal cage

Columbus Instruments also supplies monitors for:
- Animal Activity
- Cardiac Output
- Drinking and Feeding
- Respiration Rate and Startle Response

---

**RATS!!! CARDIAC OUTPUT BY THERMOCILATION**

"CARDIOMAX-II-R" is the only computer which can measure cardiac output of rats (also guinea pigs, rabbits, dogs, chickens, horses and humans). For rats, it uses unique Columbus Instruments thermociliation microprobes 1.3 mm in size.

It also measures systolic, diastolic and mean blood pressures and heart rate up to 1000 beats per minute. Stroke volume is also automatically computed.

**Why Measure Cardiac Output of Rats?**

Development of salt sensitive and salt resistant strains of rats provided inexpensive models for studying hypertension. Dynamics of rat circulatory system is similar to dogs or humans. Studies on rats cost only a fraction of studies using dogs.

**Automatic Measurements Without Supervision**

All parameters (cardiac output, stroke volume, three blood pressures, blood temperature, heart rate, time of day) can automatically be measured periodically and printed when using "Cardiomax-II-R" with Columbus Instruments Automatic Injector and Printer.

**Notice to Prospective Authors Wishing to Submit Manu scripts to**

**JOURNAL OF PHARMACOLOGY AND EXPERIMENTAL THERAPEUTICS**

The expenses associated with the review of manuscripts submitted to those ASPET-sponsored journals that are devoted to publishing original research articles have escalated dramatically in recent years because of ever-increasing costs of postage, supplies, and other office expenses, and the growing number of manuscripts submitted for publication. In order to continue to offer authors the opportunity to publish their original research in our critically reviewed, well-edited, and widely respected journals, it has become necessary for ASPET to follow the example of several other scientific societies which have instituted a uniform manuscript handling fee for each of its journals that publishes original research reports.

Therefore, all manuscripts received in the editorial office on or after July 1, 1983, must be accompanied by a check of $30.00 (in U.S. funds payable to ASPET) or by a validated purchase order from the authors' institution.

The review process for submitted manuscripts will be delayed until the manuscript handling fee or purchase order is received in the appropriate Editor's office. We regret the necessity of instituting a manuscript handling fee. The Board of Publications Trustees has concluded, however, that this charge represents the fairest and most appropriate manner to defray the costs related to the review of submitted manuscripts.

Metabolism of [14C]Paraaldehyde in Mice in Vivo, Generation and Trapping of Acetaldehyde. Malgorzata M. Zaleska and Peter K. Gesner

Changes in Histamine Synthetic Activity, Histamine Content and Responsiveness to Compound 48/80 with Maturation of Rat Peritoneal Mast Cells. Michael A. Beaven, Diane L. Aiken, Elizabeth WoldeMussie and Andrew H. Soll

Chronic Sulpiride Treatment Produces Supersensitivity of Striatal Adenylate Cyclase to Dopamine in Sexually Immature or Adult Castrated Rats. Margaret E. Gnegy, Adele Bernabei and Glenn Treisman

Enkephalins Molulate [3H]Dopamine Release from Rabbit Retina in Vitro. M. L. Dubocovich and N. Weiner

Rapid Decrease in Rat Brain Beta Adrenergic Receptor Binding during Combined Antidepressant Alpha-2 Antagonist Treatment. James A. Scott and Fulton T. Crews

Normal and Retrograde Perfusion To Probe the Zonal Distribution of Sulfation and Glucuronidation Activities of Harmol in the Perfused Rat Liver Preparation. K. Sandy Pang, Henk Koster, Ica C. M. Halsema, Egbert Scholtens, Gerard J. Mulder and Richard N. Stillwell

Effects of d-Amphetamine and Apomorphine upon Operant Behavior and Schedule-Induced Licking in Rats with 6-Hydroxydopamine-Induced Lesions of the Nucleus Accumbens. T. W. Robbins, D. C. S. Roberts and G. F. Koob

Alterations in Muscarinic Cholinergic Receptors after Preganglionic Denervation of the Superior Cervical Ganglion in Cats. Takashi Taniguchi, Kazuyoshi Kurahashi and Motohatsu Fujinara

Functional Evidence for Two Stereochemically Different Alpha-2 Adrenoceptors Regulating Central Norepinephrine and Serotonin Release. Maurizio Raiteri, Guido Maura and Paola Versace

Inactivation of Cytochrome P-450 by a Troleandomycin Metabolite. Protective Role of Glutathione. Dominique Peasyre, Marina Tinel, Dominique Larrey, Barton Cobert, Christian Funch-Brentano and Gerard Babany

Circulating Prostaglandin Metabolites in the Dog. Bruce M. Taylor, Ronald J. Shebuski and Frank P. Sun

Drug Metabolism in Isolated Proximal Tubule Cells: Aldehyde Dehydrogenase. J. T. Hjelle, D. R. Petersen and J. J. Hjelle
