The Journal of Pharmacology and Experimental Therapeutics

A Publication of The American Society for Pharmacology and Experimental Therapeutics

Founded by John J. Abel 1909

EDITOR
Eva King Killam

ASSISTANT EDITOR
Mannfred A. Hollinger

EDITORS FOR SPECIFIC FIELDS

Anesthesiology and Drug Abuse
Joseph Cochin

Autonomic Pharmacology
Joseph J. McPhillips
Robert E. Stitzel

Behavioral Pharmacology
John A. Harvey

Cardiovascular Pharmacology
Henry R. Besch, Jr.
Theodore M. Brody
Donald V. Priola

Cell Pharmacology
Toshio Narahashi
George B. Weiss

Chemotherapy
H. George Mandel

Developmental Pharmacology
Bernard L. Mirkin

Drug Metabolism and Disposition
Edward Bresnick
Jordan L. Holtzman

Endocrine Pharmacology
Paula H. Stern

Gastrointestinal Pharmacology
Thomas F. Burks

Immunopharmacology
Sydney Spector

Neuropharmacology
S. J. Enna
A. James Hance
Charles O. Rutledge

Prostaglandins and Leukotrienes
John C. McGiff

Pulmonary Pharmacology
Mannfred A. Hollinger

Renal Pharmacology
William O. Berndt

Toxicology
Curtis D. Klæassen

THE JOURNAL OF PHARMACOLOGY AND EXPERIMENTAL THERAPEUTICS (ISSN 0022-3565) is published monthly by The American Society for Pharmacology and Experimental Therapeutics, 428 E. Preston Street, Baltimore, MD 21202. Annual dues includes $60.00 for journal subscription. Second class postage paid at Baltimore, MD and at additional mailing offices. POSTMASTER: Send change of address to The American Society for Pharmacology and Experimental Therapeutics, 428 E. Preston St., Baltimore, MD 21202. Indexed by Current Contents and Index Medicus. Subscription rates $140.00 ($165.00 foreign); institutions $150.00 ($210 foreign) single copy $14.00 ($17.00 foreign). Copyright © 1983 by The American Society for Pharmacology and Experimental Therapeutics.

Satellite Symposium—IUPHAR

The Phthalate Acid Esters, 6–7 August 1984
The University of Surrey, Guildford, England

Inquiries and applications may be directed to:

Professor J. W. Bridges
University of Surrey

or

Dr. John A. Thomas
Travenol Laboratories, Inc.
Morton Grove, Illinois 60053

O₂-consumption
CO₂-production
Respiration Rate

Simultaneously measured in
1 to 8 animal cages

FEATURES
* One controller for 1 to 8 animal cages
* Continuous measurement of O₂, CO₂, and
Respiration Rate over a 24 hour period in ml/kg of body weight/hour in STP units.
* Printer prints results every four (4) minutes for each of 1 to 8 animals as well as oxygen
percent level in each animal cage
* System adaptable to small or large animals
* Continuous airflow through system with oxygen level measurements at the output and input
* High accuracy, >99% of full measuring range e.g. typical error ± 30 ml oxygen/kg/hour in
3000 ml oxygen/kg/hour range
* User adjustable alarm warns user of possible hypoxia
* Reusable absorbents
* Auto reference assures high accuracy, system periodically
measures ambient air and corrects itself
* Optional RS-232 interface for communication
with other computers
* Insensitive to temperature variations in the animal cage

Columbus Instruments also supplies monitors for: Animal Activity, Cardiac Output, Drinking and
Feeding, Respiration Rate and Sterile Response.

For more information, call or write to:
COLUMBUS INSTRUMENTS INTERNATIONAL CORPORATION
960 N. HAGUE AVE., COLUMBUS, OHIO 43204 U.S.A.

TELEX: 246514

RATS!!!
CARDIAC OUTPUT
BY THERMODILUTION

"CARDIOMAX-II-R" is the only computer which can measure cardiac output of
rats (also guinea pigs, rabbits, dogs, chickens, horses and humans). For rats, it uses
unique Columbus Instruments thermodilution microprobe 1.3 mm in size!
It also measures systolic, diastolic and mean blood pressures and heart rate up to
1000 beats per minute. Stroke volume is also automatically computed.

Why Measure Cardiac Output of Rats?
Development of salt sensitive and salt resistant strains of rats provided inexpensive models for studying
hypertension. Dynamics of rat circulatory system is similar to dogs
or humans. Studies on rats cost only
a fraction of studies using dogs.

Automatic Measurements
Without
Supervision
All parameters (cardiac output,
stroke volume, three blood
pressures, blood temperature, heart
rate, time of day) are automatically
measured periodically and printed
when using "CARDIOMAX-II-R" with
Columbus Instruments Automatic
Injector and Printer.

Formation of Deaminated Metabolites of Dopamine in Noradrenaline Neurons

Tissue Accumulation and Release of Newly Synthesized \(^3\)H-Dopamine and \(^3\)H-Noradrenaline in Canine Saphenous Veins Incubated with \(^3\)H-(−)-Tyrosine

Inhibition by \(\alpha_2\)-Adrenoceptor Agonists of the Secretion of Catecholamines from Isolated Adrenal Medullary Cells

Effects of Chronic Stimulation of Dopamine Receptors in the Nucleus Accumbens of Rat Brain Effected by a Continuous Infusion or by Single Daily Injections

Diazepam Antagonizes GABA- and Muscimol-Induced Changes of Acetylcholine Release in Slices of Guinea-Pig Cerebral Cortex

Calmodulin, Phospholipase, and Exocytosis. \(p\)-Bromophenacyl Bromide Inhibits but Mepacrine Stimulates Secretion in Rat Mast Cells

Plasma Insulin Levels and \(\beta\)-Adrenoceptor Antagonists. Relevance of the Steric Configuration of \(\beta\)-Adrenoceptor Antagonists to Their Effect on Glucose Tolerance

Effects of Beta-Adrenoceptor Blocking Agents of N-Tertiary Butyl Derivatives on Maximum Upstroke Velocity of Action Potential in Guinea-Pig Papillary Muscles

Inhibition of Arachidonic Acid Metabolism

Effect of Phytohemagglutinin-Stimulated Human Lymphocytes on Isolated Rat Atria. Participation of Lipoxigenase Products of Arachidonic Acid Metabolism

Tissue Specific Susceptibility of Alpha-Adrenoceptor Mediated Vasoconstriction to Nifedipine

Differentiation of Secretagogue Drugs by Chlorpromazine in Rat Intestine in vivo

Partial Agonist Effect of 2-[2-(1,4-Benzodioxanyl)]-2-Imidazoline (RX781094) at Presynaptic \(\alpha_2\)-Adrenoceptors in Rabbit Ear Artery

Indexed in Current Contents
Applications are invited for the position of Commissioner of Food and Drugs, Food and Drug Administration, Rockville, Maryland. The Commissioner of Food and Drugs is responsible for planning, executing and evaluating FDA’s legislated mission to protect the public health of the nation’s 220 million consumers as it may be impaired by food and food additives, drugs, biological products, cosmetics, medical devices, and ionizing and nonionizing radiation-emitting products and substances. The agency operates with a $360 million budget and approximately 7100 medical, scientific, professional and support personnel located throughout the United States.

This position is a Senior Executive Service General Position with a salary of $856,945 to $867,200 per annum, depending on qualifications. Candidates must have an M.D. or equivalent level degree in a scientific or health related field and recognized stature in a professional discipline; demonstrated management ability to direct and lead a complex, diversified medical or scientific organization; demonstrated ability to effectively represent an organization with a variety of groups; demonstrated ability to assimilate a large body of complex scientific and technical information and formulate policy and make decisions on public health related issues; and the ability to implement equal employment opportunity programs. Candidates should also have a broad knowledge of FDA’s legislated regulatory responsibilities and the major public health issues confronting the agency and the ability to formulate regulatory policy in the light of consumer safety and the economic effects of such policy.

Commissioned Officers interested in performing the duties within the Commissioned Corps may submit a resume. Commissioned Officers wishing to enter SES and all other applicants must submit an SF-171. Personal Qualifications Statement (available at all Federal Job Information Offices). All applicants should submit a supplemental statement detailing the extent to which they possess the qualifications outlined above. Each qualification should be addressed separately and pertinent experience, education, training, and awards described. Failure to submit the supplemental statement may result in an applicant being given less than due credit in the rating process. Applications should be sent to: Office of Personnel Management, Public Health Service, 5600 Fishers Lane, Room 18A-38, Rockville, Maryland 20857. For further information, contact: Patricia A. Werner, telephone: 301-443-6445.

The Public Health Service is an Equal Opportunity Employer.

Notice to Prospective Authors Wishing to Submit Manuscripts to

JOURNAL OF PHARMACOLOGY AND EXPERIMENTAL THERAPEUTICS

The expenses associated with the review of manuscripts submitted to those ASPET-sponsored journals that are devoted to publishing original research articles have escalated dramatically in recent years because of ever-increasing costs of postage, supplies, and other office expenses, and the growing number of manuscripts submitted for publication. In order to continue to offer authors the opportunity to publish their original research in our critically reviewed, well-edited, and widely respected journals, it has become necessary for ASPET to follow the example of several other scientific societies which have instituted a uniform manuscript handling fee for each of its journals that publishes original research reports. Therefore, all manuscripts received in the editorial office on or after July 1, 1983, must be accompanied by a check of $30.00 (in U.S. funds payable to ASPET) or by a validated purchase order from the authors' institution. The review process for submitted manuscripts will be delayed until the manuscript handling fee or purchase order is received in the appropriate Editor's office. We regret the necessity of instituting a manuscript handling fee. The Board of Publications Trustees has concluded, however, that this charge represents the fairest and most appropriate manner to defray the costs related to the review of submitted manuscripts.

Send reprint requests to: Dr. Bruce R. Pitt, Department of Anesthesiology, Yale University School of Medicine, 333 Cedar St., New Haven, CT 06510.

SATELLITE SYMPOSIUM—IUPHAR

Vascular Neuroeffector Mechanisms, 6-8 August, 1984, Paris, France

Organizers:

J. A. Bevan (U.S.A.),
T. Godfraind (Belgium),
R. A. Maxwell (U.S.A.),
J. C. Stoclet (France),
M. Worcel (France)

Inquiries and applications may be directed to:

Dr. Manuel Worcel
Centre de Recherches Roussel, UCLA
B.P. 9, F93230 Romainville (France)
