## RECOMBINANT RECEPTORS

RBI introduces recombinant receptors as reagents for drug discovery activities, including screening of new molecular entities. RBI offers one step access to a growing number of specific G protein-coupled receptor subtypes.

RBI's products feature high quality, specificity, sensitivity, stability and convenience, without requiring any change in your current assay protocols. Ideally suited for antagonist binding assays, RBI's recombinant receptors find application in subtype selectivity testing, cross-reactivity tests, high-flux binding screens and as standard reagents for signal transduction research.
