# The Only Comprehensive Assay System for Receptor Signaling.

**THE CYTOSENSOR SYSTEM:  
FUNCTIONAL RESPONSES IN MINUTES**

The **CytoSensor Microphysiometer System** is the latest tool used for drug discovery and signal transduction research! Using a patented biosensor, the system can monitor the receptor-mediated responses from living cells in minutes, producing functional dose responses in just a few hours. Because of the unique biosensor, receptor activation can be studied even without previous knowledge of the signal transduction pathway. Thus, a single assay system can be used to evaluate a variety of receptor families. Previously time-consuming experiments can be performed quickly and easily, making it possible to obtain  $EC_{50}$  and  $IC_{50}$  values in just 4-7 hours<sup>1</sup>; without radioactivity. And novel receptor responses, not seen with other methods, have been observed.
