Results are presented as means ± S.E.M., n = 6, Compared with normal control: ##P < 0.01; compared with ob/ob mice: \*P < 0.05, \*\*P < 0.01.

HOMA-IR = (fasting glucose levels [mmol/L]×fasting insulin levels [mIU/L])/22.5

Supplemental Figure 2. HPLC chromatogram of Akebia saponin D.

(A)ASD Standard , (B) ASD Sample

$$C_{\text{Standard}} = \frac{1.80 \text{ mg}}{10 \text{ mL}} \times 92.5\% = 0.1665 \text{ mg/mL}, \quad A_{\text{Standard}} = 292556, \quad A_{\text{Sample}} = 294161,$$

$$V_{\text{Sample}} = 10 \text{ mL}, \quad M_{\text{Sample}} = 1.68 \text{ mg}.$$

$$\text{Purity (\%)} = \frac{\frac{C_{\text{Standard}} \times A_{\text{Sample}} \times V_{\text{Sample}}}{A_{\text{Standard}}} \times 100\%}{M_{\text{Sample}}} = \frac{\frac{0.1665 \times 294161 \times 10}{292556} \times 100\%}{1.68} = 99.65\%$$
