# TO AUGMENT YOUR EXPERIENCE— CLINICAL RESOURCES

## from WILLIAMS & WILKINS

Let these two exciting titles join forces  
with your professional abilities.

*Try them out free for 20 days!*

### Manual Of Clinical Pharmacology

Edited by **David Robertson, MD**, and  
**Craig R. Smith, MD**

It is well known that a core armamentarium of several dozen key drugs will suffice for the vast majority of clinical situations. This handy new manual gives you the most thorough understanding possible of the drugs commonly used in clinical practice, and supplies an annotated bibliography on these drugs as a point of access to the more detailed pharmacological literature. The discussion sections are not intended to be complete reviews. They are provided to quickly identify drugs which are *practical, difficult, or new*. You have to have some knowledge of *all* of the thousands of drugs on the market . . . but you should have a very thorough understanding of the few dozen drugs that are most frequently used. This little book highlights those areas that are truly most important to you.

**Contents:** Antibiotics. Antihypertensives. Antiarrhythmics and cardiovascular drugs. Diuretics. Drugs affecting neurotransmission. Anticoagulants. Analgesics. Drugs affecting the central nervous system. Oncologic agents. Drugs affecting the endocrine system. Miscellaneous. Index.

**1981/about 290 pages/\$17.00**  
(softcover)/7300-1

### Practical Clinical Psychopharmacology Second Edition

**William S. Appleton, MD** and **John M. Davis, MD**

*"The authors, who possess impeccable credentials, have put together a handbook that is reliable, responsible, judicious, careful, and practical."*

— from a review of the *First Edition* in  
**Modern Medicine**

The authors call their book "a practical guide based on solid science." You will find it to be an indispensable manual of the latest clinical applications of psychopharmacology.

This new *Second Edition* distills the essential information from more than 15,000 published articles. It succinctly covers the diverse aspects of psychopharmacology and deals with the major categories of useful pharmacotherapeutic agents. **Practical Clinical Psychopharmacology** will provide you with all the latest information so you can prescribe psychotropic drugs rationally and counter side-effects efficiently.

**Contents:** Before drug therapy begins. Choosing an antipsychotic. Principles of prescribing antipsychotics. Pharmacological treatment for mood (affective) disorders. Anti-anxiety agents: adjuncts to psychotherapy. Medical emergency: overdose. Index.

**1980/173 pages/illustrated/\$15.95/0238-4**

## ORDER TODAY

**YES, please send me these selections on 20-day FREE approval:**

- Robertson **Manual of Clinical Pharmacology** (7300-1) **\$17.00** [U.S. price]
- Appleton **Practical Clinical Psychopharmacology** (0238-4) **\$15.95** [U.S. price]

I've checked the payment option below:

- Payment enclosed. I save all postage and handling with full refund still guaranteed.
  - Bill me.
- Bill my  VISA  MasterCard

Residents of CA, VA, MD, please add sales tax. Prices subject to change without notice. Prices slightly higher outside the U.S. Please pay in U.S. dollars.

**TO ORDER TOLL FREE, CALL US TODAY** at  
1-800-638-0672 from 9 AM to 4 PM. From Maryland phones, call 528-4221 collect.

# Notice to Contributors

(Effective July 1976)

## Scope of Submitted Manuscripts

The Journal invites for review original papers dealing with any aspect of interactions of chemicals with biological systems. Both terms—"chemicals" and "biological systems"—imply as general application as possible. Manuscripts dealing primarily with new methods will be reviewed only if the methods are shown to lead to new or more reliable data than were previously attained.

## Organization of the Manuscript.

In most cases manuscripts should contain the following sections in the order listed: 1) title page; 2) running title page; 3) abstract; 4) introduction; 5) methods; 6) results; 7) discussion; 8) acknowledgments; 9) references; 10) footnotes; 11) tables; 12) legends for figures; and 13) figures. Each section should begin on a new page.

## Submission of Manuscripts.

Two typewritten copies, double-spaced on 21.6- by 28-cm paper, should be sent to Dr. Eva King Killam, Department of Pharmacology, School of Medicine, University of California, Davis, California 95616. Pages should not be stapled together.

*It is understood that neither the manuscript nor the data it contains have been previously published nor are being submitted elsewhere for publication.*

If and when the manuscript is accepted for publication, it will be necessary for the American Society for Pharmacology and Experimental Therapeutics, Inc., to receive in writing assignment of copyright from *all* authors of each manuscript. The forms for this assignment will be mailed from the Editorial Office.

**1. Title page.** This should contain the complete title of the manuscript, the names of all authors, and the laboratory of origin.

**2. Running title page.** Each published paper needs a running title, which appears at the top of each page in the Journal. The running title should contain no more than 35 spaces, including punctuation. It should convey the sense of the full title. Commonly used abbreviations (such as "ATP," "ACh," etc.) may be used in the running title. This page should also contain the name and address of the person to whom galley proof should be sent.

**3. Abstract.** Each published paper should be preceded by an abstract. The abstract should begin with the names of the authors and the title of the manuscript. It should present in a concise form the purpose, the general methods, the findings, and the conclusions of the manuscript. Abstracts should be limited to 200 words or less; abstracts of more than 250 words will not be accepted.

**4. Introduction.** This section should not be labeled. It should contain a clear statement of the aims of the reported work, or of the hypotheses which the work was designed to test. A brief account of the background of the reported work may also be given in this section.

**5. Methods.** This section should contain explicit, concise descriptions of all new methods or procedures employed in the work. Modifications of previously published methods should be described. Commonly used methods require only a citation of the original source. When meth-

ods are described, the description should be such as to enable the reader to judge their accuracy, reproducibility, reliability, etc. Very extended descriptions of methods may be submitted for deposit with the American Society for Information Science National Auxiliary Publications Service (NAPS) c/o Microfiche Publications, P.O. Box 3513, Grand Central Station, New York, NY 10017. A text reference or footnote stating that the full description is available from NAPS permits interested readers to obtain the information, and does not occupy an inordinate amount of Journal space. There is a nominal charge to authors for this procedure; those who request the complete information from NAPS pay a small fee.

**6. Results.** This section ordinarily contains the experimental data to be presented, but not extended discussions of their significance. Results are usually easier for readers to grasp if they are presented in graphic or tabular form, rather than discursively. Graphic presentation of data is preferred over tabular presentation. Data should not be needlessly repeated in text, tables, and figures. Sufficient data must be given to allow readers to judge the variability and reliability of the results. Statistical tests used and the data analyzed should be explained so that the interested but non-expert reader can interpret the findings.

**7. Discussion.** This section should be pertinent to the results. Speculative discussion is not discouraged, but the speculation should be based on the data presented. The discussion should be as concise as possible, within the limits of the ideas which the authors wish to propose.

**8. Acknowledgments.** These may be included at the end of the body of the text of the manuscript, but should have a separate heading.

**9. List of references.** In text citations, give the author's name and the year of publication (*e.g.*, McCarthy, 1952; Ruth and Gehrig, 1929). With more than two authors, the text citation should contain the name of the first author, followed by "*et al.*," and the date (*e.g.*, Kennedy *et al.*, 1960). In the list of references, entries are to be arranged alphabetically by author, and not numbered. All authors' names are to be given. If reference is made to more than one publication by the same authors in the same year, suffixes (a, b, c, etc.) should be added to the year in the text citation and in the list of references.

The list of references is to contain, in sequence, the following information: authors' names and initials, title of the cited article, title of the journal in which the article appeared (abbreviated; see below), volume number of the journal, inclusive pagination, and year of publication. Abbreviations for journals should conform to the *Biosis List of Serials* (BioSciences Information Services of Biological Abstracts, Philadelphia, Pa. 19103). Citations of personal communications or of unpublished observations should be given in parentheses at the appropriate place in the text, not in the list of references. A paper may not be cited as "in press" unless it has been accepted for publication. In such cases, give the name of the journal.

Except in extraordinary circumstances, no more than four references should be cited in support of any given point.

**10. Footnotes.** All footnotes to the title, authors' names, or text should be indicated by arabic numeral

superscripts, not by letters or other symbols. The footnotes should be typed in sequence on a separate page, not at the bottom of the pages on which they appear. Footnotes to tables are discussed under *Tables*, below.

**11. Tables.** Each table should be on a separate page. Tables should be numbered consecutively with arabic numerals, and should be designed to fit the column or page size of the Journal. A brief descriptive title should be given at the top of each table. The table number should be given in capital letters, the title in boldface upper and lower case letters (*e.g.*, TABLE 3. **Uptake of labeled drug by rat liver slices**). The footnotes to the tables should be referred to by italicized lower case superscript letters (*a*, *b*, *c*, etc.) and should appear beneath the table involved, not on a separate page of the manuscript. Extensive tabular material not absolutely essential to the manuscript will be accepted for deposit with the ASIS/NAPS (see "Methods," above). In such instances a footnote in the published paper will refer the interested readers to NAPS from which copies may be obtained.

**12. Legends for figures.** These should be numbered consecutively in arabic numerals, and should appear on a separate page of the manuscript. Legends should explain the figures in sufficient detail so that repeated referral to the text is unnecessary. Abbreviations in the legends should conform to those in the text (see "Abbreviations," below).

**13. Figures.** Illustrations should be submitted in duplicate as unmounted glossy photographic prints, no larger than 8 by 10 inches. The authors' name and address, and the number of the figure should be placed on the back of each print. Illustrations must be clear enough to permit reproduction without retouching, and legibility after reduction to single-column size (approximately 3½ inches in width). Uniform symbolism should be used for all illustrations in a manuscript. Symbols, numbers, and letters in the illustrations must be at least 1.5 mm in height after reduction to single column size. The title of each figure should appear in the legend rather than on the figure itself. Photomicrographs and electron micrographs should be labeled with a magnification calibration in micro or Angstrom units. A statement of the magnification should appear in the figure legend.

#### Abbreviations.

Magnitudes of variables being reported should be expressed in numerals. Most abbreviations are used without punctuation, with no distinction between singular and plural forms (*e.g.*, 1 mg, 25 mg). The usual prefixes are to be used for multiples or submultiples of the basic units (*e.g.*, kg, g, mg, µg, ng, pg). The following abbreviations, or their properly prefixed multiples or submultiples, may be used without definition in the text, tables, and figures:

#### Units of mass

gram	g
mole	mol
equivalent	Eq
microatom	µat

#### Units of concentration

molar (moles/liter)	M
normal (Eq/liter)	N
percent	%

#### Units of electricity

volt	V
ampere	A
cycles/sec	Hz

#### Units of radioactivity

curie	Ci
counts per min	cpm
disintegrations per min	dpm
roentgen	r

#### Units of length or volume

meter	m
micron	µ
Angstrom	Å
liter	l (spell out in text)

#### Units of time

hour	hr
minute	min
second	sec

#### Miscellaneous

degrees of temperature	°C
gravity	g
median doses	LD <sub>50</sub> , ED <sub>50</sub> , etc.
optically isometric forms	<i>d</i> -, <i>l</i> -, <i>dl</i> -
routes of drug administration	<i>i.v.</i> , <i>i.p.</i> , <i>s.c.</i> , <i>i.m.</i>
standard deviation	S.D.
standard error	S.E.

Whenever an abbreviation other than those above is to be used in a manuscript, it is to be defined in the text or in a footnote thereto, the first time it is used. Abbreviations for commonly used substances should be those recommended by the *Journal of Biological Chemistry*. Abbreviations for drugs may be used if properly defined on first use, and if the chemical or generic name of the drug is given when the abbreviation is first used. Abbreviations may be used in the running title, but not in the full title of manuscript.

#### Drugs.

Generic names should be used in text, tables, and figures. Trade names may be mentioned in parentheses in the first text reference to the drug, but should not appear in titles, figures or tables. When a trade name is used, it should be capitalized; generic or chemical names are not capitalized. The chemical nature of new drugs must be given when it is known. The form of drug used in calculations of doses (*e.g.*, base or salt) should be indicated. When several drugs are used, it may save space to include a separate paragraph in "Methods," or a separate table or footnote, listing the relevant information about all drugs employed.

#### Page Charges.

Authors are assessed page charges at the rate of \$30 per printed page. With the galley proof, authors will receive a request for information concerning such charges. These charges will be assessed only if they involve no personal expense to the authors.

The cost of a limited number of illustrations will be borne by the Journal: the cost of excessive numbers of illustrations will have to be defrayed by the authors.

# KEEPING CURRENT

... is it important to you?

Three journals that guarantee you'll be told what's happening NOW in pharmacology, physiology, and biochemistry.

## PHARMACOLOGICAL REVIEWS

An Official Publication of the American Society for Pharmacology and Experimental Therapeutics, Inc.

Editor: Paul L. Munson, Ph.D., School of Medicine, University of North Carolina

*Pharmacological Reviews* is a showcase journal for ideas that would otherwise be buried in the mass of pharmacological literature. Important review papers on the current status of a given topic are allotted plenty of space (from 10 to 40 pages) to exhaustively cover that topic. A fine balance is achieved in these articles, which are written in a clear, simple and concise fashion so as to be intelligible to non-specialists, yet are precise and detailed enough to be of great interest to experts in the field.

At various times, *Pharmacological Reviews* has addressed such subjects as biochemical and cellular pharmacology, drug metabolism and disposition, renal pharmacology, neuro-pharmacology, behavioral pharmacology, clinical pharmacology, and toxicology. Designed specifically as a medium through which those interested in these topics can communicate directly, *Pharmacological Reviews* serves the entire pharmacological community and is vital reading for physiologists, pharmacologists, and biological chemists.

## THE JOURNAL OF PHARMACOLOGY AND EXPERIMENTAL THERAPEUTICS

An Official Publication of the American Society for Pharmacology and Experimental Therapeutics, Inc.

Editor: Eva King Killam, Ph.D., School of Medicine, University of California at Davis

Founded by John J. Abel in 1909, this is one of the oldest and most prestigious journals in scientific research. Publishing original articles on all aspects of the interactions of chemical and biological systems by some of the best known authors in the field, *The Journal of Pharmacology and Experimental Therapeutics* is practically a necessity for the specialist in either research or applied physiology.

You'll find full coverage of the biochemical and cellular aspects of pharmacology; renal, pulmonary, gastrointestinal, and cardiovascular pharmacology; drug metabolism and disposition, analgesia and drug abuse, and toxicology; autonomic pharmacology; behavioral effects; and, finally, chemotherapy and immunopharmacology. Each issue of this monthly periodical averages over 200 pages and presents the very best in research for the physiologist and pharmacologist.

## DRUG METABOLISM AND DISPOSITION: the biological fate of chemicals

An Official Publication of the American Society for Pharmacology and Experimental Therapeutics, Inc.

Editor: Kenneth C. Leibman, Ph.D., University of Florida Medical School

The clinical, academic, or research professional will find *Drug Metabolism and Disposition* an essential medium for the rapid communication of research findings in this field. The journal reports on the fate of drugs, toxicants, and environmental and industrial chemicals *in vivo* and *in vitro*. Specific areas of interest include pathways and mechanisms of absorption, distribution, metabolism, and excretion of foreign compounds; relationships between chemical and physical properties of compounds and their metabolism and disposition; biological and pharmacological control of these variables, and methodology for their study. Research reports and documentation, comments on current literature, and letters to the editor, previews, and announcements of interest to you round out this journal.

Please enter my new subscription to the journals checked below. (I understand that payment must be received before my subscription can begin.)

### Pharmacological Reviews (quarterly)

- Personal: \$20.00/yr.
- Institutional: \$25.00/yr.
- In-training: \$14.00/yr.
- Foreign: add \$5.00/yr.

### The Journal of Pharmacology and Experimental Therapeutics (monthly)

- Personal: \$100.00/yr.
- Institutional: \$120.00/yr.
- Foreign: add \$20.00/yr.

### Drug Metabolism and Disposition: the biological fate of chemicals (bimonthly)

- Personal: \$40.00/yr.
- Institutional: \$58.00/yr.
- Foreign: add \$5.00/yr.

(In-training rates apply to residents, fellows, interns, and students. When requesting this rate, which is limited to three years, please give training status and name of institution.)

Members of the American Society for Pharmacology and Experimental Therapeutics should order subscriptions to the official society journals through the American Society for Pharmacology and Experimental Therapeutics, 9650 Rockville Pike, Bethesda, MD 20014
