BEHAVIORAL PEDIATRICS AND CHILD DEVELOPMENT

A Clinical Handbook

Second Edition

**By Thomas J. Kenny, PhD and Raymond L. Clemmens,
MD, FAAP**

The complex problems of child development often require the expertise of both the psychologist and the pediatrician. This handbook examines those aspects of child development, behavior, and learning which are of mutual concern to both specialties — and presents a realistic overview of how they can complement each other.

The relationship of mind and body is stressed since physical factors and psychological issues are continuously interacting. Common developmental disabilities are examined, followed by a section detailing various methods of evaluation and management. The many variables that affect development are covered — including genetic endowment, neurologic integrity, social and cultural influences, environmental influences, and interpersonal reactions.

New chapters have been added for the second edition on personality development, mental retardation, communication disorders, and case histories.

DIAGNOSIS AND DRUG TREATMENT OF PSYCHIATRIC DISORDERS

Adults and Children

Second Edition

**By Donald F. Klein, MD; Rachel Gittelman, PhD;
Frederic Quitkin, MD; and Arthur Rifkin, MD**

The authors' clinical experience and a critical review of scientific literature are combined in one of the first psychiatric texts to utilize DSM-III. Current information is included on the diagnosis and drug treatment of mental disorders — including sections on the treatment of schizophrenia, affective disorders, and childhood disorders. Evidence is presented regarding the interaction of the somatic therapies with other forms of treatment.

Clinical expertise and research experience are combined to bring you the latest information on the diagnosis and drug treatment of mental disorders in adults and children. So this is one convenient source you'll always want to be able to depend on.

A MATTER OF EXPERTISE

If you need whole-body autoradiographs, you are definitely an expert. In pharmacodynamics, for instance.

If you make them, you must be an expert too. Freezing the specimens in standardized position; sectioning at the correct temperature, speed and knife-angle; recognizing

even the tiniest anatomical details; handling and processing of materials... they all require meticulous care, "feeling" and precision. In short: craftsmanship.

That is precisely the reason why we can make whole-body autoradiographs of text-book perfection. It's just a matter of expertise!

ABL likes to talk shop – your particular brand. If you start a project involving whole-body autoradiography and are cost-conscious, we'd be happy to work it out with you from the very beginning!
