THE JOURNAL OF PHARMACOLOGY AND EXPERIMENTAL THERAPEUTICS (ISSN 0022-3565) is published monthly by The American Society for Pharmacology and Experimental Therapeutics, 428 E. Preston Street, Baltimore, MD 21202. Annual dues include \$60.00 for journal subscription. Second class postage paid at Baltimore, MD and at additional mailing offices. Postmaster send address changes (Form 3579) to Williams & Wilkins, 428 E. Preston St., Baltimore, MD 21202. Indexed by *Current Contents* and *Index Medicus*. Subscription rates \$120.00 (\$140.00 foreign); institutions \$165.00 (\$185 foreign) single copy \$14.00 (\$16.00 foreign). Dear ABC,

Please tell me, without any obligation on my part, how I can order for myself and for my friends anywhere in the world any book in print, from any publisher, from any country, in almost any language.

Tell me in addition how I can save 20-40% on these books joining the ACADEMIC BOOK CLUB and paying a membership fee as low as 1.8¢ daily (\$6.50 annually).

I understand that one of the features of the club is that I am not now, nor will I ever be, under any obligation whatsoever to buy any particular book or quantity of books from Academic Book Club.

Enclosed is \$5 for a 20% discount trial order certificate.

!!!RATS!!!

CARDIAC OUTPUT BY THERMODILUTION

"CARDIOMAX" model II-R is the only computer which can measure cardiac output of rats (and also guinea pigs, rabbits, dogs, chickens, humans and horses). For rats, it uses unique Columbus Instruments thermodilution microprobes **1/3 mm in size!**

It also measures systolic, diastolic and mean blood pressures and heart rate up to 1000 beats/minute. Stroke volumes is also automatically computed.

Why Measure Cardiac Output of Rats?

Development of salt sensitive and salt resistive strains of rats provided inexpensive models for studying hypertension. Dynamics of rat circulatory system is similar to dogs or humans. Studies on rats cost only a fraction of studies using dogs.

Automatic Measurements Without Supervision

All parameters (cardiac output, stroke volume, three blood pressures, blood temperature, heart rate, time of day) can automatically be measured periodically and printed when using "CARDIOMAX-II-R" with Columbus Instruments Automatic Injector and Printer.

Expert Reviews of New Frontiers in Research and Clinical Pharmacology

NEW...

ANTIEPILEPTIC DRUGS Second Edition

*Editors: D.M. Woodbury,
J. Kiffin Penry,
C.E. Pippenger*

This revised edition of the classic **ANTIEPILEPTIC DRUGS** maintains the systematic, lucid presentation that made the previous edition the text of choice for drug treatment of the epilepsies. With a roster of experts from all the most pertinent disciplines, this volume is an unexcelled source of clear, authoritative information.

The book has been thoroughly revised to bring you up-to-the-minute advances in the clinical management of seizure disorders. This new edition highlights vital areas of recent progress such as • new insights into pharmacokinetics and mechanisms of drug action • new drug testing and monitoring methods • new drugs that have recently become available • and research on potential anticonvulsant agents.

Be sure to order your copy of this timely new edition of a reference that "should be at the fingertips of anyone treating epileptic patients."—(from a review of the first edition in **NEUROLOGY**)

903 pages/\$65.00/(1982) ISBN 0-89004-498-8 (Order Code 556)

CARDIOVASCULAR DRUGS AND THE MANAGEMENT OF HEART DISEASE

*Gordon A. Ewy and
Rubin Bressler, editors*

A timely, authoritative assessment of the principles, uses, and types of cardiovascular drugs currently in use for the treatment of heart disease. This book is an essential addition to the reference libraries of cardiologists, internists and cardiac surgeons. Part 1 focuses exclusively on the drugs themselves and part 2 treats the management of specific cardiovascular disorders; although the emphasis here is on drug therapies, diet and exercise therapies are considered as well.

880 pages/\$68.00/(July 1982) ISBN 0-89004-568-2 (Order Code 667)

THE LIVER: BIOLOGY AND PATHOBIOLOGY

*Irwin M. Arias, Hans Popper,
David Schachter and
David A. Shafritz, editors*

This is the first book to successfully bridge the gap between basic biology and the pathology and clinical management of the liver. In over 50 chapters, basic and clinical investigators pool their knowledge about the liver on the cellular and systemic levels, discussing its function in blood coagulation, metabolism, nutrition, renal function and more. The book concludes with chapters covering models of cell injury, and the pathobiology of major mechanisms in liver diseases, such as cholestasis, fibrogenesis, neoplastic transformation, and portal hypertension.

890 pages/394 illus./102 tables/\$95.00/(June 1982) ISBN 0-89004-575-5 (Order Code 672)

LEUKOTRIENES AND OTHER LIPOXYGENASE PRODUCTS

*(Advances in Prostaglandin,
Thromboxane, and
Leukotriene Research, Vol. 9)
Bengt Samuelsson and
Rodolfo Paoletti, editors*

The recent discovery of leukotrienes has created a considerable stir within the medical-scientific community. This volume is the first comprehensive investigation of this important class of compounds. It provides complete coverage of the biosynthesis and metabolism of leukotrienes and lipoxygenase products, the pharmacologic modulation of leukotriene formation, and the biologic effects of leukotrienes. Major findings presented include: the leukotrienes' involvement in the formation of SRS-A; the role of SRS-A in hypersensitivity reactions; the leukotrienes' role in inflammation; and interactions between leukotrienes and cyclo-oxygenase products.

382 pages/\$44.00/with illustrations and tables/(1982)/
ISBN 0-89004-741-3 (Order Code 1052)

PRINCIPLES AND METHODS OF TOXICOLOGY

A. Wallace Hayes, editor

Designed to function as both a textbook and valuable review, this book describes most toxicologic testing methods currently in use. Each method or procedure is described in light of technique and the interpretation of data, and rigorous guidelines are provided to allow the reader to perform the experiment or testing protocol. The rationale behind each experiment is given, and the various problems and pitfalls that may be encountered are emphasized. A separate section dealing with specific organ systems includes chapters on kinetics, metabolism, structure versus activity, and effects on organelles and target organs.

750 pages/132 illus./72 tables/\$68.00/(1982) ISBN 0-89004-470-8 (Order Code 525)
