Notice to Prospective Authors Wishing to Submit Manuscripts to

**JOURNAL OF PHARMACOLOGY AND
EXPERIMENTAL THERAPEUTICS**

The expenses associated with the review of manuscripts submitted to those ASPET-sponsored journals that are devoted to publishing original research articles have escalated dramatically in recent years because of ever-increasing costs of postage, supplies, and other office expenses, and the growing number of manuscripts submitted for publication. In order to continue to offer authors the opportunity to publish their original research in our critically reviewed, well-edited, and widely respected journals, it has become necessary for ASPET to follow the example of several other scientific societies which have instituted a uniform manuscript handling fee for each of its journals that publishes original research reports. Therefore, all manuscripts received in the editorial office on or after July 1, 1983, must be accompanied by a check of \$30.00 (in U.S. funds payable to ASPET) or by a validated purchase order from the authors' institution. The review process for submitted manuscripts will be delayed until the manuscript handling fee or purchase order is received in the appropriate Editor's office. We regret the necessity of instituting a manuscript handling fee. The Board of Publications Trustees has concluded, however, that this charge represents the fairest and most appropriate manner to defray the costs related to the review of submitted manuscripts.

EXECUTIVE OFFICER OF THE SOCIETY

Kay Croker

THE JOURNAL OF PHARMACOLOGY AND EXPERIMENTAL THERAPEUTICS (ISSN 0022-3565) is published monthly by The American Society for Pharmacology and Experimental Therapeutics, 428 E. Preston Street, Baltimore, MD 21202. Annual dues includes \$60.00 for journal subscription. Second class postage paid at Baltimore, MD and at additional mailing offices. POSTMASTER: Send address changes (Form 3579) to Williams & Wilkins, 428 E. Preston St., Baltimore, MD 21202. Indexed by *Current Contents* and *Index Medicus*. Subscription rates \$140.00 (\$165.00 foreign); institutions \$185.00 (\$210 foreign) single copy \$14.00 (\$17.00 foreign). **Director, Division of Biopharmaceutics
National Center for Drugs and Biologics
FOOD AND DRUG ADMINISTRATION
Salary \$56,945-\$63,800
(Senior Executive Service)**

The Food and Drug Administration has a position available for Director, Division of Biopharmaceutics. The Director is responsible for carrying out a comprehensive Agency intramural and extramural research program for purposes of identifying biopharmaceutic problems, developing new and improved methodology for determining whether drug products have acceptable bioavailability or bioequivalence, and for establishing feasible meaningful product regulatory standards.

This is an exciting and challenging opportunity for an individual who has experience in the field of pharmaceutical research, including responsibility for conducting and administering a biopharmaceutics research program either in an academic or industrial setting. Candidates will be evaluated on ability to plan, implement and evaluate programs; represent the organization and deal effectively with key individuals in the Federal and state governments, the academic community, professional and scientific organizations, consumer groups, and industry; implement equal employment and career opportunity programs; and skills and experience in the medical and scientific community. It is desirable that candidates possess significant contributions to the scientific state of the art in the form of papers and presentations; experience in conducting biopharmaceutic research in support of submissions for drug applications; general knowledge of FDA regulations governing submissions of drug applications; and international recognition as a biopharmaceutics scientist.

A curriculum vitae should be sent to: Jeylene Wood, DIVISION OF PERSONNEL MANAGEMENT (HFA-440), Food and Drug Administration, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857. For further information, please call Ms. Wood collect on (301) 443-3634. Applications should be received by September 30, 1983.

This position may also be filled by current Commissioned Officers of the U.S. Public Health Service or by former Commissioned Officers willing to rejoin the Corps.

O₂-consumption CO₂-production Respiration Rate

Simultaneously
measured in
1 to 8 animal
cages

FEATURES

- One controller for 1 to 8 animal cages
- Continuous measurement of O₂, CO₂ and Respiration Rate over a 24 hour period in ml/kg of body weight/hour in STP units.
- Printer prints results every four (4) minutes for each of 1 to 8 animals as well as oxygen percent level in each animal cage
- System adaptable to small or large animals
- Continuous airflow through system with oxygen level measurements at the output and input
- High accuracy, >98% of full measuring range e.g. typical error ± 30 ml oxygen/kg/hour in 3000 ml oxygen/kg/hour range
- User adjustable alarm warns user of possible hypoxia
- Reusable absorbants
- Auto reference assures high accuracy, system periodically measures ambient air and corrects itself
- Optional RS-232 interface for communication with other computers
- Insensitive to temperature variations in the animal cage.

Columbus Instruments also supplies monitors for: Animal Activity, Cardiac Output, Drinking and Feeding, Respiration Rate and Startle Response.

For more information, call or write to:
COLUMBUS INSTRUMENTS INTERNATIONAL CORPORATION
Supplier of individual instruments and total measuring systems
950 N. HAGUE AVE., COLUMBUS, OHIO 43204 U.S.A.
PHONE: (614) 488-6176 TELEX: 246514

RATS!!! CARDIAC OUTPUT BY THERMODILUTION

"CARDIOMAX-II-R" is the only computer which can measure cardiac output of rats (also guinea pigs, rabbits, dogs, chickens, horses and humans). For rats, it uses unique Columbus Instruments thermodilution microprobes **1.3 mm in size!** It also measures systolic, diastolic and mean blood pressures and heart rate up to 1000 beats per minute. Stroke volume is also automatically computed.

Why Measure Cardiac Output of Rats?

Development of salt sensitive and salt resistive strains of rats provided inexpensive models for studying hypertension. Dynamics of rat circulatory system is similar to dogs or humans. Studies on rats cost only a fraction of studies using dogs.

Automatic Measurements Without Supervision

All parameters (cardiac output, stroke volume, three blood pressures, blood temperature, heart rate, time of day) can automatically be measured periodically and printed when using "Cardiomax-II-R" with Columbus Instruments Automatic Injector and Printer.
