## THINK GLOBALLY. TARGET LOCALLY.

Whether you're looking at whole systems or local phenomena, the new Model 2004 ALZET<sup>®</sup> osmotic pump helps you observe the in vivo effects of compounds more accurately.

This miniature, implantable pump continuously delivers your test agents for four weeks, at a rate of 0.25  $\mu\text{l/hr}$ . Its small size, long duration, and low flow rate make the Model 2004 ideal for brain infusion or targeted delivery in mice and rats.

ALZET pumps offer more accurate in vivo delivery. By sustaining compound levels in plasma and tissues, they allow the effects of your agent to develop fully and reproducibly. ALZET pumps have successfully delivered hundreds of agents – including proteins and other short half-life compounds. Using a simple catheter attachment, you can localize delivery to specific areas. And operation is fully automatic, eliminating the need for complicated dosing schedules.

Look at drug delivery from a new perspective. Call ALZET Technical Services at (800) 692-2990 or (415) 962-2251. Specify your region of interest, and we'll send an information package that will reveal a world of possibilities.
