INDEX TO VOLUME XXXIII

Acetone, diacetone alcohol and, A comparison of the pharmacological action of .................................................. 175

Acetyl choline, reaction of the perfused frog heart to, The influence of atropine and epinephrine on the ......................... 93

Acid and neutral salts of acid fuchsin, A comparative study of the convulsant action of the ........................................ 1

— fuchsin, acid and neutral salts of, A comparative study of the convulsant action of the ........................................ 1

— series, barbituric, hypnotics of the, Studies on .................................................. 43

Adsorption of quinine, On the, by blood cells .................................................. 185

Alcohol, diacetone, and acetone, A comparison of the pharmacological action of .................................................. 175

American Society for Pharmacology and Experimental Therapeutics, The Scientific Proceedings of the ............................. 259

Amines (related) and pituitary in experimental edemas, Comparative anti-edemic efficiency of epinephrine and ................. 129

Antagonisms and reversals of contracted crop (esophageal) muscle caused by a variety of muscular stimulants .................. 483

Antiedemic efficiency, Comparative, of epinephrine and related amines and pituitary in experimental edemas ..................... 129

Antiperistaltic contractions, peristaltic and, of the ureter, The effect of morphine and papaverine upon the ......................... 191

—, peristaltic and, activity of the ureter, A note on the influence of sodium phenobarbital upon the ................................ 201

Anuran in bio-titration of pituitrin, The .................................................. 301

Arsenical compounds, two new pentavalent trypanocidal, The biologic study of .................................................. 443

Atkinson, H. V. The effect of external and internal application of heat and cold on the muscular activity of the stomach of unanesthetized dogs .................................................. 321

Atropine and epinephrine, The influence of, on the reaction of the perfused frog heart to acetyl choline ......................... 93

Barbituric acid series, hypnotics of the, Studies on .................................................. 43

Barlow, O. W. The influence of atropine and epinephrine on the reaction of the perfused frog heart to acetyl choline ............. 93

Biologic study of two new pentavalent trypanocidal arsenical compounds, The .................................................. 443

Bio-titration of pituitrin, The anuran in .................................................. 301

Blood cells, On the adsorption of quinine by .................................................. 185

— pressure, Variations in on repeated administration of l- and dl-ephe-drines .................................................. 219

Poisoning, chronic morphine, in dogs, Studies of..................... 329, 359, 371
Proceedings of the American Society for Pharmacology and Experimental
Therapeutics, The Scientific .................................................. 259
Equilibrium in biological systems. By Carl Voeltlin, Floyd
DeEds, and S. M. Rosenthal .............................................. 259
Some features of strychnine poisoning. (Cinematographs.) By Torald
Sollmann ........................................................................... 260
Prevention of toxin poisoning with colloidal dyes, indicating a new
principle for chemotherapy. By P. J. Hanzlik and E. M. Butt ........ 260
By H. N. Cole, John Gammel (by invitation), Nora Schreiber (by
invitation), and Torald Sollmann .................................... 261
Cardiazol—a pharmacological study. By W. J. R. Camp .............. 262
An investigation of certain respiratory phenomena. By D. E. Jackson. 263
The influence of respiratory depressants and stimulants upon postural
apnea in the duck. By M. S. Dooley and Theodore Koppányi .... 264
The decomposition of halogen-containing hydro-carbons in animals
during anaesthesia. By G. H. W. Lucas .............................. 264
The prevention of acute intoxication from certain local anesthetics.
By P. K. Knoefel (by invitation), R. P. Herwick (by invitation),
and A. S. Loevenhart .................................................. 265
Blood serum magnesium and magnesium anesthesia. By Isaac Neuwirth
and George B. Wallace .................................................. 266
The narcosis of muscle by gases. By Helen Tredway Graham (intro-
duced by H. S. Gasser) .................................................. 266
Synergistic action of thyroid and morphine. By M. H. Seegers (intro-
duced by A. L. Tatum) .................................................. 267
The effect of morphine upon the oestrous cycle, growth and fertility of
the white rat. By Harold B. Myers and John B. Flynn (by
invitation) .............................................................. 267
The peripheral vasomotor mechanism in experimental shock. By
Maurice I. Smith ................................................................ 267
Cocaine psychosis in laboratory animals. By A. L. Tatum ............. 268
The racial differences in reaction towards certain mydriatic drugs. By
K. K. Chen and E. J. Poth (by invitation) ................................ 268
Pharmacological effects which manifestly point to an underlying electrical
mechanism. By R. Beutner .................................................. 268
Observations on the effect of prolonged administration of iodides on the nitrogen metabolism. By G. F. Grabfield and Emily Knapp (by invitation) ................................................................. 269

Electron equilibria in biological systems as influenced by drugs and poisons. By Floyd DeEds, Sanford M. Rosenthal, and Carl Voegtlin ........................................................................................................... 269

The effect of the state of oxidation on the toxicity of certain elements. By C. W. Muehberger and H. H. Schrenk (introduced by A. S. Loevenhart) ...................................................................................... 270

The blood sulfur in diseases of the energy metabolism. By Alfred E. Koehler .......................................................................................................................... 271

Water metabolism in fat fed and fat-free fed dogs under morphine addiction and acute withdrawal. By H. G. Barbour, L. G. Hunter (by invitation), and C. H. Richey (by invitation) ........... 271

The effects of certain anesthetics (isoamylethyl barbituric acid and ethyl carbamate) on basal metabolism in the rat. By M. O. Lee .............................................................. 272

Arsenic as an alternative. By R. D. Templeton (introduced by A. L. Tatum) ......................................................................................................................... 272

The influence of atropine and epinephrine on the response of the frog heart to acetylcholine. By O. W. Barlow .................................................................................. 273

A method for the quantitative determination of cyanide in small amounts. By Ralph O. Smith (introduced by A. L. Tatum) ..................................................................................... 273

The influence of posterior pituitary extract upon the responses to orally administered drugs. By C. H. Thienes and A. J. Hockett (introduced by H. B. Myers) ..................................................... 273

The effect of thyroid feeding on the susceptibility of rabbits to digitalis. By A. R. McIntyre (introduced by A. L. Tatum) ................................................................. 274

The significance of the ovarian hormones in pregnancy. By H. B. van Dyke and R. G. Gustavson (by invitation) ................................................................. 274

Some observations upon the pharmacology of arabic acid and acacia. By E. W. Schwartz, Leonard H. Cretcher (by invitation), and R. M. Hann (by invitation) ........................................... 275

The diuretic action of nitrates. By N. M. Keith and Mary Whelan (by invitation) ..................................................................................................................... 276

Petrolatum-agar emulsion on surviving intestine. By George B. Roth ................................................................. 276

The response of excised intestines to simultaneous changes of potassium and calcium concentrations. By R. W. Whitehead (introduced by T. Sollmann) ..................................................................................... 277

Further observations on the peristaltic and antiperistaltic contractions of the ureter as affected by drugs. By Charles M. Gruber .................................................................................... 278

Results with the pigeon-emesis method of estimating the potency and full therapeutic dosage of digitalis. By P. J. Hanslik, A. B. Stockton (by invitation), and M. L. Tainter ........................................................ 279

The biological assay of ergot preparations. By G. L. Pattee (by invitation) and E. E. Nelson ......................................................................................... 279

The prevention of experimental effusions by the parathyroid hormone (Collip). By Harry Gold ........................................................................................... 279
The toxicity of sodium fluoride in intravenous injection in rabbits. By Chauncey D. Leake ........................................ 279

The anesthetic properties of carbon dioxide. By Chauncey D. Leake and Ralph M. Waters (by invitation) ....... 280

A comparative study of synthetic and natural ephedrines. By K. K. Chen .......................................................... 281

Variation in blood pressure on repeated administration of l- and dl-ephebrines. By K. K. Chen ................................. 281

The effect of nitrates on the nasal mucous membrane of the human. By D. C. Walton and E. F. Kehr (introduced by A. S. Loevenhart) .......................... 281

Nerve mechanisms in the causation and treatment of irritative edemas. By M. L. Tainter and F. L. Reichert (by invitation) ........................................ 282

Bismuth as a diuretic. By H. G. Mehrten (by invitation), P. J. Hanzlik, D. C. Marshall (by invitation), and N. S. Brown .......... 282

Passage of bismuth through the placenta. By Clifford S. Leonard and Robert B. Love (by invitation) .................. 282

Blood concentrations of bismuth. By Clifford S. Leonard and Alfred F. Seibert .................................................. 283

Reactions of the circulation to morphine. By Carl F. Schmidt and A. E. Livingston ........................................... 284

Proparsanol, etharsanol and, in experimental trypanosomiasis in rats and rabbits, The therapeutic value of ......................... 459

Quinine, On the adsorption of, by blood cells ......................... 185

Rabbit syphilis, experimental, monosodium salts of 2-p-arsono-anilino-ethanol and 3-p-arsono-anilino-propanol in, The therapeutic action of the ................................................. 479

Rabbits, rats and, The therapeutic value of etharsanol and proparsanol in experimental trypanosomiasis in ................. 459

Rats and rabbits, The therapeutic value of etharsanol and proparsanol in experimental trypanosomiasis in .................. 459

Respiratory center, The sequence of events in the excitation of the, by caffeine and some other stimulants ................................. 147

Reversals, Antagonisms and, of contracted crop (esophageal) muscle caused by a variety of muscular stimulants .................. 483

Salts, acid and neutral, of acid fuchsin, A comparative study of the convulsant action of the ........................................... 1

——, monosodium, of 2-p-arsono-anilino-ethanol and 3-p-arsono-anilino-propanol in experimental rabbit syphilis, The therapeutic action of the ........................................ 479

Smith, Ralph G. The sequence of events in the excitation of the respiratory center by caffeine and some other stimulants ......................... 147

Smooth muscles, excised, of different species, A comparison of the actions of cocaine and epinephrine upon .................... 21

Sodium phenobarbitral, A note on the influence of, upon the peristaltic and antiperistaltic activity of the ureter .................. 201
Species, different, excised smooth muscles of, A comparison of the actions of cocaine and epinephrine upon ................................................................. 21
Stimulants, muscular, Antagonisms and reversals of contracted crop (esophageal) muscle caused by a variety of ................................................................. 483
