

CONTENTS

NUMBER 1, MAY, 1933

I. A Study of the Effects of Agave Concentrate in the Treatment of Experimental Nephritis Induced in Animals. I. Nephritis Induced in Rabbits by the Use of Tartrates. By Herman D. Jones. Assisted by Keith D. Crane, G. Bernard Johnston and C. R. Henry	1
II. A Study of the Effects of Agave Concentrate in the Treatment of Experimental Nephritis Induced in Animals. II. Nephritis Induced in Dogs by the Use of Uranium Nitrate. By Herman D. Jones. Assisted by R. C. Hughes and G. Bernard Johnston . . .	25
III. Effects of Some Quaternary Ammonium and Analogous Compounds on the Autonomic Nervous System. By Reid Hunt and R. R. Renshaw	51
IV. The Interaction of Histamin and Nicotine on the Intestine. By Frederick Bernheim	67
V. The Action of Veratrine and Urethane on Tissue Oxidation. By Frederick Bernheim and Mary L. C. Bernheim	73
VI. The Physiological Action of Norconessine. By A. C. White . . .	79
VII. The Effect of the Separated Fractions of the Posterior Lobe of the Pituitary on the Fat Content of the Liver. By A. C. White . .	89
VIII. A Contribution to the Pharmacology of Anabasine. By H. B. Haag	95
IX. Ethers and Thio-Ethers of Triethylammonium Compounds. By Reid Hunt and R. R. Renshaw	105

NUMBER 2, JUNE, 1933

X. The Fate of Glyceryl Trinitrate in the Tolerant and Non-tolerant Animal. By Lathan A. Crandall, Jr.	127
XI. Recovery from Experimental Barbitol Poisoning under Various Types of Fluid Administration. By W. E. Gower and J. Van de Erve	141
XII. Chemotherapy of Quinoline Compounds. IV. The Action of Certain Quinoline Compounds on Paramoecia. By Phanindranath Brahmachari, Radhakrishna Banerjea and Upendranath Brahmachari	149
XIII. Comparative Potency of Some Digitalis Specialties According to the Pigeon Method. By A. J. Lehman and P. J. Hanzlik . .	151
XIV. The Comparative Physiological Actions of dl- β -Phenylisopropylamines. II. Bronchial Effect. By Gordon A. Alles and Myron Prinzmetal	161

XV. Some New Alkamines in the Tetrahydronaphthalene Series. By Gerald G. Woods and Nathan B. Eddy	175
XVI. Studies of Phenanthrene Derivatives. I. A Comparison of Phenanthrene and Some 2-, 3-, and 9-Monosubstitution Products. By Nathan B. Eddy	183
XVII. A Study of the Cause of Death in Experimental Nicotin Poisoning in Dogs. By F. E. Franke and J. Earl Thomas	199
XVIII. Heat Regulation and Water Exchange. XIV. Liver Edema in the Mechanism of Fever Produced by Beta-Tetrahydronaphthylamine and by Anaphylaxis. By H. T. Marshall and H. G. Barbour	209
XIX. Heat Regulation and Water Exchange. XV. The Water Content of the Rat Liver in Shiga Vaccine Fever and Amidopyrine Antipyresis. By M. K. Horwitt, H. Sherman and H. G. Barbour	217
XX. The Intracisternal Minimum Lethal Dose of Procaine Hydrochloride (Novocain) in Dogs. By Frank Wang Cotui	223
XXI. The Effect of Different Narcotics and Narcotic Combinations on the Minimum Lethal Dose of Procaine Hydrochloride Intracisternally. By Frank Wang Cotui	229
XXII. Observations on the Influence of Certain Drugs on Edema of Paraphenylenediamine. By Milton B. Cohen, Philip Wasserman and J. A. Rudolph	235
XXIII. The Influence of the Oxygen Tension on the Reversal of Proteolysis (Protein Synthesis) in Certain Malignant Tumors and Normal Tissues. By Carl Voegtlin, Mary E. Maver and J. M. Johnson	241

NUMBER 3, JULY, 1933

XXIV. The Scientific Proceedings of the American Society for Pharmacology and Experimental Therapeutics. Twenty-fourth Annual Meeting, Held at Cincinnati, Ohio, April 10-11-12, 1933	267
XXV. Studies on Calcium. VII. Some Calcium Effects on Thoracic Lymph Flow of Dogs. By Arnold L. Lieberman	293
XXVI. Studies on Calcium. VIII. The Therapeutic Effects of Calglucon (Calcium Gluconate) on Thrombophlebitic Edema. By Arnold L. Lieberman and Leo M. Zimmerman	301
XXVII. The Mechanism of Vomiting Induced by Quinidine. I. Quinidine Emesis in Animals with Denervated Hearts. By A. Carlton Ernstene and Samuel Lewis	305
XXVIII. The Effect of Anthelmintics on the Host. I. Tetrachlorethylene. II. Hexylresorcinol. By B. V. Christensen and H. J. Lynch	311
XXIX. The Development of Tolerance to Nicotine by Rats. By A. Behrend and C. H. Thienes	317
XXX. The Effect of the Administration of Cyanides on the Thyroid Gland of Chickens. By A. W. Spence	327
XXXI. The Physico-chemical Properties of Some New Choline Derivatives in Relation to Their Chemical Constitution and Pharmacologic Action. By W. F. Oettingen and R. O. Bowman	333

CONTENTS

v

XXXII. Liver Damage in Dogs and Rats after Repeated Oral Administration of Cinchophen, Ethyl Ester of Paramethyl-Phenyleinchonic Acid (Tolysin) and Sodium Salicylate. By Henry G. Barbour and Merl E. Fisk.....	341
XXXIII. The Mechanism of Vomiting Induced by Quinidine. II. By A. Carlton Ernstene and Samuel Lewis.....	359
XXXIV. The Local Anesthetic Action of <i>p</i> -Aminobenzoates of Diethylamino-Ethoxy Alcohols. By W. H. Horne and R. L. Shriner..	371
NUMBER 4, AUGUST, 1933	
XXXV. On the Determination of the Toxicity of Neosarsphenamine. I. The Increase in Toxicity on Exposure to Air. By C. A. Morrell and C. W. Chapman.....	375
XXXVI. On the Determination of the Toxicity of Neosarsphenamine. II. The Determination of the Characteristic Curve for Rats. By C. A. Morrell and C. W. Chapman.....	391
XXXVII. Febrile, Respiratory and Some Other Actions of Dinitrophenol. By M. L. Tainter and W. C. Cutting.....	410
XXXVIII. Cumulative Poisoning by Squill Derivatives and by Ouabain. By E. W. Wallace and H. B. Van Dyke.....	430
XXXIX. A Study of the Antidotal Action of Sodium Thiosulphate and Dihydroxyacetone in Cyanide Poisoning, and the Alleged Antidotal Action of Glucose. By B. B. Turner and H. R. Hulpieu.	445
XL. Phosphate-buffered Injection Medium Disturbance in Caffeine Effects on Voluntary Muscle Response. By Ralph H. Cheney.	470
XLI. Toxicity and Deposition of Thallium in Certain Game Birds. By Paul A. Shaw.....	478
XLII. Narcotic Potency in the Paraldehyde Series. By P. K. Knoefel.	488

ILLUSTRATIONS

Agave concentrate in treatment of nephritis (Plate 1)	19
— concentrate in treatment of nephritis (Plate 2)	21
— concentrate in treatment of nephritis (Plate 3)	23
— concentrate in treatment of nephritis (Plate 3)	45

Interaction of drugs on intestine (Fig. 1A)	69
— of drugs on intestine (Fig. 1B)	69
— of drugs on intestine (Fig. 2)	69
Effect of 9.5 mgm. per kilogram (intravenous) norconessine on the intestinal volume (upper tracing) and the blood pressure (lower tracing) in the anaesthetised cat (Fig. 1)	82
Isolated rabbit intestine (ileum); upper tracing circular muscle, lower tracing longitudinal muscle (Trendelenburg method) (Fig. 2)	84
— rabbit intestine (duodenum). Trendelenburg method; upper tracing circular muscle, lower tracing longitudinal muscle (Fig. 3)	84
Effect of pituitary on fat content of liver (Fig. 1)	92
Nicotine anabasine (Fig. 1)	96
Contribution to pharmacology of anabasine (Fig. 2)	101
— to pharmacology of anabasine (Fig. 3)	101
Date of three typical experiments on recovery rate and urine flow in the same animal, weighing 11.9 kgm., given 4.0 grams of sodium barbital intravenously in 10 per cent solution on each occasion, and subjected to three different types of fluid administration (Fig. 1)	144
dl- β -phenylisopropylamines (Fig. 1)	166
— (Fig. 2)	166
— (Fig. 3)	168
— (Fig. 4)	169
Record of blood pressure and respiration in a dog poisoned with nicotin while under ether anesthesia (Fig. 1)	201
Nicotin poisoning in dogs (Fig. 2)	204
Proteolysis and reversal of proteolysis of rabbit muscle extract at pH 6.97 in nitrogen and oxygen respectively (Chart 1)	250
Influence of copper upon the reversal of proteolysis of rabbit skeletal muscle extract in a current of oxygen at pH 6.90 (Chart 2)	251
Proteolysis and reversal of proteolysis of a Jensen sarcoma extract at pH 6.91 (Chart 3)	254
— in nitrogen and reversal of proteolysis in oxygen of Walker carcinoma tissue extract at pH 6.66 (Chart 4)	255
Influence of copper upon the reversal of proteolysis in a Walker carcinoma extract at pH 6.50 (Chart 5)	256

Proteolysis of fibrin by papain in nitrogen and the reversal of proteolysis (protein synthesis) in oxygen at pH 7.2 (Chart 6).....	259
Studies on calcium (Fig. 1).....	302
Development of tolerance to nicotine (Fig. 1).....	319
Diffusion velocity of m/100 choline hydrochloride (A) and m/100 trimethylammonium-ethyl-amine-chloride (B) (Fig. 1).....	339
Liver damage after cinchophen, etc. (Plate 1).....	345
Rate of increase in toxicity of protected and unprotected solutions (Fig. 1).....	387
Determination of toxicity of neoarsphenamine (Fig. 1).....	395
— of toxicity of neoarsphenamine (Fig. 2).....	398
— of toxicity of neoarsphenamine (Fig. 3).....	399
— of toxicity of neoarsphenamine (Fig. 4).....	401
Relationship of dosage to the fever and to the percentage mortality caused by dinitrophenol subcutaneously in unanesthetized rats (Fig. 1).....	414
Average changes in respiration and rectal temperature following 20 mgm. per kilogram of dinitrophenol intramuscularly in 5 unanesthetized rabbits (Fig. 2).....	417
Respiratory and circulatory responses to dinitrophenol, 25 mgm. per kilogram intramuscularly (Fig. 3).....	418
Correlation of blood sugar level and the symptoms observed in rabbits poisoned with sodium cyanide (Fig. 1).....	452
Effect of repeated dosage of dihydroxyacetone on the blood sugar (i.e., reducing power of blood) (Fig. 2).....	455
Sodium thiosulphate as an antidote to sodium cyanide poisoning (Fig. 3).....	459
— thiosulphate plus dihydroxyacetone as an antidote for sodium cyanide (Fig. 4).....	462
Behavior of the blood sugar level during and after asphyxia caused by re-breathing (Fig. 5).....	464
Comparisons of the sugar and lactic acid in the blood during cyanide poisoning (Fig. 6).....	465
Graph demonstrating the difference in XY value units between the treated muscle and its non-treated control with respect to the composition of the buffered injection medium (Fig. 1).....	473
