

Supplemental Figure 2

Dosing-time dependent influence of docetaxel on apoptosis in the female mice intestine

Docetaxel (20 mg/kg/week) was given to *female* mice once a week for 3 weeks at 2 or 14 HALO. Seventy two hrs after the final dosing of the agent, the intestinal mucosa of small intestine (proximal 8 cm) was removed. The procedure of TUNEL method was described in the MATERIALS and METHODS section.

□ vehicle, ■ docetaxel, Mean ± SE, n=6 in each,

* p< 0.05 and ** p< 0.01 vs. vehicle, # p<0.05 vs. 2 HALO
